**In the Specification:**

Please amend the specification at Paragraph [0032] as follows:

[0032] The output of the regeneration function 74 provides estimates for each of the individual signals received for each user. A technique has been proposed that significantly reduces the computational complexity of this regeneration operation 74 in related application ~~TIME VARYING FILTER IMPLEMENTATION~~ TIME VARIANT FILTER IMPLEMENTATION, serial number ~~10/001,877~~, filed ~~November 16, 2001~~, which is incorporated herein by reference. As noted above, each of the regenerated signals is individually sent to the PIC function 66. The outputs of the regeneration function 74 are complex signals at the chip-rate.

REMARKS

Applicant has herein amended the specification to add missing information at Paragraph [0032]. No new matter is added by this amendment and the scope of the application has not changed, but the application is made more complete by this amendment. Any remaining questions may be directed to the undersigned.

Respectfully submitted,
